

DetachPipe

Need More Space On Your E-Mail Servers?

Reclaim Gigabytes of free disk space on your e-mail servers now by deleting attachments or by saving them to each user's local machine.

Intelligent Processing

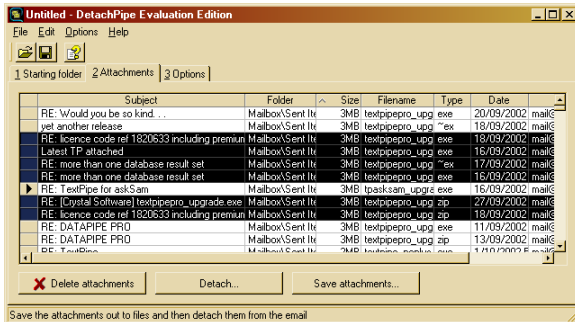

DetachPipe analyzes each e-mail and its attachments and then presents a list which can be sorted by date, attachment size, subject, folder or attachment type.

Selected attachments can be deleted, saved to disk, or saved to disk and then deleted. DetachPipe leaves a clickable link in the e-mail indicating where the attachment was saved to, and it keeps a detailed log file of all the actions it has taken.

With 10 Exchange Servers, DetachPipe has saved our Email Administrator's neck!

User Benefits

- Clickable link to the attachment is left in each e-mail
- Attachment numbering is handled automatically (e.g. multiple resume.doc attachments will be renamed to resume.doc, resume1.doc, resume2.doc etc)
- Attachments can be deleted via the Recycle Bin for extra safety
- Sort attachments by subject, folder, size, name, date and attachment type
- Analyse e-mails from any folder
- Control where attachments are saved to
- Maintain original e-mail folder structure when attachments are saved
- No limit on the number of e-mails processed or the number of attachments
- Retains the attachment icon on e-mails
- Actions logged to a detailed log file for auditing purposes.

Attachment analysis results can be easily sorted

Process E-mails from Anywhere

DetachPipe connects to any industry standard MAPI-compliant e-mail software:

- Microsoft Outlook (with or without Microsoft Exchange Server 5.5, 2000 etc)
- Lotus Notes, Netscape, Applix Application Suite and other MAPI-compliant e-mail software (see our white paper online).

Virus Scanning

Any installed virus scanning continues to occur on all opened e-mails - so your corporate infrastructure remains secure.

Some of Our Clients

DetachPipe is used by Blue Chip Venture Company, Pequot Capital, Der Spiegel, Insight Technology Inc, Darden Business School, Ida Vend Broadcasting and many other large organizations.

Supported Systems

DetachPipe runs on Windows 95, 98, ME, NT, 2000 and XP with 5 MB free disk space and 64 MB RAM. DetachPipe requires a MAPI-compliant e-mail system.
